Method of determining the dependence of the parameters of the steady state regime power system of potential control actions.

We represent method which allows receiving steady-state parameters of power networks in short terms without addressing to traditional programs of calculation of steady-state operating modes in a number of cases.

Key-words: power system, linearization, steady-state regime, optimization.

Korovkin Nikolay Vladimirovich, Dr. Sc., Professor, Head of Department «Theoretical Foundations of Electrical Engineering» of St. Petersburg State Polytechnic University.
